Geography

My passion for Geography stems from travelling around to different countries and cities around the world. The beauty of this is that the curiosity never stops and actually has an opposite effect of wanting to find out and learn more.

I feel geography is the one that captures my imagination best, as it is ever-changing. The world is evolving all the time and therefore the geography we learn needs updating. I am fascinated by how these changes will never end; populations will always alter, tectonic plates will forever move, and coastlines will eternally erode.

Geography exposes us to communities, languages, cultures, customs and people these are just a few aspects of Geography can do. I found out this out more so on my travels wide and near. No two places are the same and it is my mission in life to explore and delve into as many cultures and places as I can.

The curriculum at Dunstall Hill is enriching and enables to enquire, explore and find out information about their local environment and further out a field.

The geography curriculum will equip children with knowledge about diverse places, people and environments. It will arm children with powerful knowledge about the world around them and help them to develop a love for the subject of geography, and also recognise their own role in becoming a responsible global citizen, and this is why being the subject lead for geography will empower to do so.
